

LEAPMOTION

WOW

Getting Started

- Download python 2
- Install [LeapSDK](#)
- Plug in leapMotion Controller
- Play around with the leapmotion visualizer!
 - A leapmotion icon should show up when it is plugged in, if you click on it “visualizer” should be one of the options. Or you can play the orientation game!

Command Line

- To run our files in python 2, we will need to use command line
- Mac users: open terminal, use “cd” to change directory, “ls” to list files in current directory, and “python fileName.py” to run in python 2
- Windows Users: Same thing, except use “dir” instead of “ls”

Python Implementation

- Download the leapMotionDemo.py file in the shared folder
- Navigate to that file with command line
- Run file with python 2 (“python leapMotionDemo.py”)
